

THIS WEEK IN FOREST SCHOOL...

Year 1 -
Living
Things

Today we shared the story *A Good Place* by Lucy Cousins. It linked brilliantly to the children's learning in science, where they are looking at classifying animals by their characteristics. We learned that insects are invertebrates and can be further organised into groups called arthropods, molluscs and annelids. The children completed a survey relating to how many invertebrates they found. We also looked at the different habitats that the insects needed in the story, some children made a small pond as a result for the dragonfly.
