

THIS WEEK IN FOREST SCHOOL...

Year 1 -
Plants

Today we worked as teams to measure and calculate how old our adopted trees were. Some were trickier than others as they had a wider circumference than the tape measure. We calculated that the youngest tree was 22 years old and the oldest tree was 82 years old. We then read the story Titch by Pat Hutchins. The children thought carefully about why we had shared that story. The children made links with their Science work and measuring the trees.
